AI Knowledge (T/F) [18%]

For each of the statements below, fill in the bubble **T** if the statement is always and unconditionally true, or fill in the bubble **F** if it is always false, sometimes false, or just does not make sense:

Question 1 1 / 1 point

The reward for a probabilistic decision making model can be given from states R(s), stats-action R(s, a), or transition R(s, a, s').

Taise

Question 2 0 / 1 point

In HMM (Hidden Markov Models), there are two important independence properties. The first is that the future depends only on the present; the second is that observations are independent of each other.

🗶 💿 True

→ False

Question 3 0 / 1 point

The process of learning of a neural network happens in both the feed-forward (prediction) part and back-propagation part.

X True

→ False

Question 4 1 / 1 point

Forward procedure computes all

 $a_t(s_i)$

on state trellis, while the Viterbi algorithm only computes the best for each step.

✓ ● True False	. Quiz Submissions - Mid Term 3- Requires Respondus LockDown Browser - CSCI361 - 20223 - Foundations	or Artificial Intellig
Question 5		1 / 1 point
Both deductive True False	and inductive learning agents learn new rules/facts from a dataset.	
Question 6		0 / 1 point
•	ciples of deep learning are similar to those of basic neural networks, but deep lessed as for larger datasets.	earning has
Question 7		1 / 1 point
	ng a probability distribution, normalization will be needed in the end to make m to 1. However, even if you use the inference rules properly, the normalization	
Question 8		1 / 1 point
_	eful as a system construction method, because we only need to expose the agany manual input.	ents to
Question 9		1 / 1 point
Probabilistically True False	y speaking, two coin tosses are conditionally independent.	
Question 10		1 / 1 point
	f a MEU (Maximum Expected Utility) is that a rational agent should always cho ximizes the utility.	ose the

✓ ● True

False	
Question 11	0 / 1 point
Both perceptron and decision tree learning can learn majority function (output 1 if and only if than half of n binary variables are 1) easily. It is representable within a perceptron and only ne branches in DTL (Decision Tree Learning). True False	
Question 12	1 / 1 point
Discrete valued dynamic Bayes nets are not HMMs (Hidden Markov Models). True False	
Question 13	1 / 1 point
Probabilities of propositions may change with new evidence. True False	
Question 14	1 / 1 point
A complete probability model specifies every entry in the joint distribution for all the variables True False	5.
Question 15	1 / 1 point
The major difference between a POMDP (Partially Observed Markov Decision Process) and a gombo (Markov Decision Process) is merely a sensor model P(e s). True False	eneral
Question 16	1 / 1 point
For Bayesian learning, we are given a set of new data D, background knowledge X, and are suppredict a concept C where P(C DX) is the most probable. True False	posed to
Question 17	1 / 1 point

: Quiz Submissions - MidTerm 3- Requires Respondus LockDown Browser - CSCI561 - 20223 - Foundations of Artificial Intellig...

12/10/22, 10:19 AM

In the ID3 algorithm, we need to choose the attribute that has the largest expected information gain.

✓	True
	False

Question 18 0 / 1 point

States transit randomly for Markov Chains and Hidden Markov Models.

\Rightarrow	True
	False

Decision Trees [12%]

Lyft wants to analyze if a student at USC gets a lyft depending on if it is raining around the university, if the destination is near or far and whether or not the ride was free. They have provided the training data below and they need your help to train a machine to decide whether a student gets a lyft.

Note:

(for calculations, always take digits up to 3 decimal places and drop the rest without rounding. Eg. 0.9737 becomes 0.973)

For all the following questions, use log base 2 (Use Table 2.1 to answer Q19-21)

(Table 2.1)

#	Rain	Free?	Near?	Takes Lyft
1	Yes	No	Yes	Yes
2	No	No	Yes	No
3	Yes	No	No	Yes
4	Yes	No	No	Yes
5	No	Yes	Yes	Yes
6	Yes	Yes	Yes	Yes
7	No	Yes	Yes	No
8	Yes	Yes	No	Yes
9	No	Yes	Yes	No

2	FALSE	TRUE	TRUE	No
3	FALSE	TRUE	TRUE	No
4	TRUE	FALSE	TRUE	Yes
5	TRUE	FALSE	TRUE	Yes
6	FALSE	FALSE	TRUE	No
7	TRUE	TRUE	TRUE	Yes
8	FALSE	FALSE	FALSE	No
9	TRUE	TRUE	FALSE	Yes

Which would be th	e worst attribute	to split on for	the given	data? [2%]

	Χ

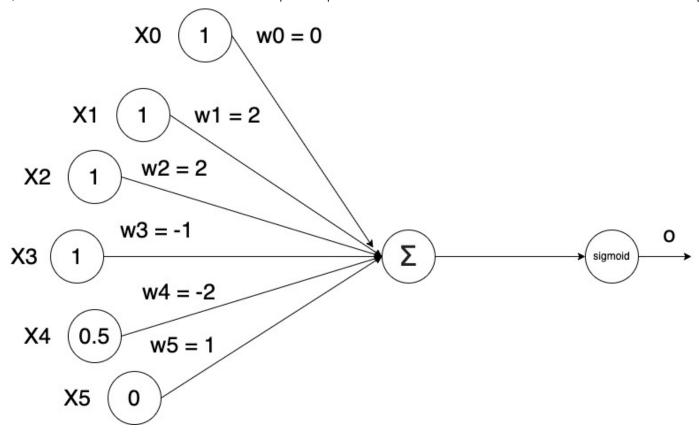

_/	Ζ
V	_

Question 23 2 / 2 points

What output (IS Correct) would the machine give after being trained (assuming the calculations are correct for the root node) for the test data where X=False, Y= False and Z=True. [Hint: The decision tree learned uses only one attribute] [2%]

Neural Networks [15%]

For the following perceptron model,

Loss function, $P = -(d-o)^2/2$ Learning rate, $\alpha = 100$

Activation function = sigmoid = $1/(1+e^{-x})$

Expected output d = 1

Note:

(for calculations, always take digits up to 3 decimal places and drop the rest without rounding. Eg. 0.9737 becomes 0.973)

[12%]

For the given inputs X0 = 1, X1 = 1, X2 = 1, X3 = 1, X4 = 0.5, X5 = 0 if the value of the predicted output "o" after forward propagation is 0.9, calculate the updated weights after running backpropagation.

Question 24 0 / 2 points

w0 = ?

Answer: -9 **(-0.900)**

Question 25 0 / 2 points

w1 = ?

Answer: -7 (2.900, 2.9, 2.90)

Question 26 0 / 2 points

w2 = ?

Answer: -7 (2.900, 2.9, 2.90)

Question 27 0 / 2 points

w3 = ?

Answer: -10 **(-0.100, -0.1, -0.10)**

Question 28 0 / 2 points

w4 = ?

Answer: -6.5 (-1.550, -1.55)

Question 29 2/2 points

w5 = ?

Answer: 1

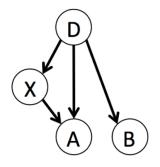

Question 30 3 / 3 points

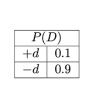

Calculate the predicted output for the updated weights using the same input values.

Answer: 1 (0.999, 0.998)

Bayesian Networks [15%]

P(A D,X)				
+d	+x	+a	0.9	
+d	+x	-a	0.1	
+d	-x	+a	0.8	
+d	-x	-a	0.2	
-d	+x	+a	0.6	
-d	+x	-a	0.4	
-d	-x	+a	0.1	
-d	-x	-a	0.9	

P(X D)			
+d	+x	0.7	
+d	-x	0.3	
-d	+x	0.8	
-d	-x	0.2	

P(B D)			
+d	+b	0.7	
+d	-b	0.3	
-d	+b	0.5	
-d	-b	0.5	

Chop off your final answer to three decimal places like Decision Tree questions. Ex 0.36899 should be chopped as 0.368, 0.1 should be written as as 0.100.

Question 31 4 / 4 points

What is the probability of having disease D and getting a positive result on test A? [4%]

Answer: 0.087 🗸

Question 32 0 / 4 points

What is the probability of not having disease D and getting a positive result on test A? [4%]

Answer: 0.45 **(0.450)**

Question 33 3 / 3 points

What is the probability of having disease D given a positive result on test A? [3%]

Answer: 0.162 🗸

Question 34 0 / 4 points

What is the probability of having disease D given a positive result on test B? [4%]

Answer: 0.7 **(0.134)**

Probability Theory [15%]

Ash enters a reality game where 30 different types of Pokémon are present, he sets his journey to chase down powerful ones. Being a Pokémon capturing expert he can capture every Pokémon possible. Each one that he finds and battles against has an equally likely chance of being one of the 30 types.

Question 35 0 / 5 points

If Ash captures 5 Pokémon, what is the probability that he has captured at least 2 of the same type. [5%]

Answer: 0.001 **(0.296)**

Question 36 0 / 5 points

Assuming there is no limit on the number of Pokémon that Ash can capture, how many would he have to take down to make the probability of at least 2 of the same type more likely than not. (Answer as a whole number without decimal point precision) [5%]

Answer: 0 💥 (7)

Question 37 0 / 5 points

Ash loses a battle after 2 powerful Pokémon types Darkrai and Scizor are added to the game. Probability that the Pokémon that he lost to being Darkrai is 70% and Scizor is 30%. Darkrai has a special attack which it uses with a probability of 0.90. The same special attack is occasionally used by Scizor with a probability of 0.08. If Ash loses because of the special attack, what is the probability that the Pokémon that he encountered is Darkrai. [5%]

Answer: 0.010 **x** (0.960)

HMM - Temporal Modeling [15%]

An environment is defined as follows:

States = {S1, S2, S3}

Observations = {a, b, c}

Transition probabilities: T(<initial state>, <final state>)

	S1	S2	S3
S1	0.0	0.5	0.5
S2	1.0	0.0	0.0
S3	0.0	1.0	0.0

Emission/Observation Probabilities: E(<state>, <observation>)

	а	b	С
S1	0.5	0.5	0.0
S2	0.3	0.3	0.4
S3	0.25	0.0	0.75

Initial State Probabilities: (<state>)

	π
S1	0.25
S2	0.75
S3	0.0

Answer the below questions based on the information above:

Question 38 0 / 2 points

How many non-zero edges will be there in the state diagram of this environment? [2%]

Answer: 11 💥 (4)

Question 39 0 / 4 points

Select all the possible state paths for the Observation Sequence O = a, c, a in the list below. [4%]

➡ **✓** ✓ S1, S2, S1

➡ **✓** S1, S3, S2

💢 🗸 S3, S2, S1

S2, S1, S2

S2, S1, S3

💢 🗸 S1, S2, S3

Question 40 0 / 5 points What is the probability of the observation sequence O = a, c, a? [5%]

Answer: 0.666 (0.027, 0.02656)

Question 41 0 / 2 points

What is the most probable path for getting the observation sequence O = a, c, a? [2%]

- **✓** S1, S2, S1
- ⇒ 💢 S1, S3, S2
 - × S3, S2, S1
 - **✓** S2, S1, S2
 - **✓** S2, S1, S3
 - **✓** S1, S2, S3

Question 42 0 / 2 points

The classroom slides defined some general problems for temporal models. Which general problem does the above question (i.e, determining the most probable state path for getting the observation sequence O = a, c, a), come in? [2%]

- ightharpoonup State Explanation($P(X_{1:t}|E_{1:t})$)
 - \checkmark State Estimation($P(X_t|E_{1:t})$)
 - \checkmark State Prediction($P(X_{t+k}|E_{1:t}),\;k>0$)
 - $igspace{\hspace{0.1in} imes}$ State Smoothing($P(X_k|E_{1:t}),\;k< t$)
 - ullet Model Learning($P(M_t|E_{1:t})$)

Naive Bayes [10%]

As a star student in AI class, you have been recruited by the local weather station to help predict the weather. They give you access to their secret data store, displayed below. Only consider data from this table when making your assessments. Simplify all fractions if possible.

Temp above 75	·		USC won football	Storm next day?
0	1	1	1	0
1	0	0	0	0
1	0	1	1	0

: Quiz Submissions - MidTerm 3- Requires Respondus LockDown Browser - CSCI561 - 20223 - Foundations of Artificial Intellig... 12/10/22, 10:19 AM

0	1	1	1	1
1	0	1	0	1
1	0	0	1	0
0	0	1	1	0

Use the following abbreviations for the columns:

T = temp above 75

H = humidity above 65

P = pressure below 40

W = USC won football

S = Storm next day?

[2%]

What is the maximum likelihood estimate for a storm the next day?

NOTE: LEAVE your answer in SMALLEST FRACTION FORM.

Question 43 1 / 1 point

P(S = 1) = 2 (50 %) / 7 (50 %)

Question 44 1 / 1 point

 $P(S = 0) = __5$ $\checkmark(50 \%) / __7$ $\checkmark(50 \%)$

[2%]

What is the conditional probability of USC winning football given there will be a storm the next day?

NOTE: LEAVE your answer in SMALLEST FRACTION FORM.

Question 45 1 / 1 point

 $P(W \mid S = 1) = 1$ $\sqrt{(50 \%)} / 2$ $\sqrt{(50 \%)}$

Question 46 1 / 1 point

 $P(W \mid S = 0) = 4$ $\sqrt{(50 \%)} / 5$

Question 47 3/3 points

Although the news team seems insistent, you recommend not using the USC won football column to predict storms. Select all the correct reasons you can give them as to why you ignore this data. [3%]

The USC won football column does not contain any information and won't produce better results.

Even if this column contains information, it is likely irrelevant to the predicted variable and may cause noisy predictions.

Using more data typically causes overfitting, leading to incorrect future predictions.

Using more data typically causes underfitting, decreasing future performance.

Question 48 3/3 points

Using the 3 approved columns (T,H,P), use the Naive Bayes method to determine the joint probabilities P(S=1, X) and P(S=0, X), where X is (T=1, H=1, P=0), then select the predicted class c^* (S=1 or S=0). Report your answer to 3 significant digits (ex: 0.0123). [3%]

NOTE: Probabilities should be in DECIMAL form to 3 significant digit for part 1, and 2, while part 3 (c*) is an INTEGER.

1.
$$P(S = 1, X) = ____$$

2.
$$P(S = 0, X) =$$

Answer for blank #1: 0.013
